In the Claims:

Kindly amend the claims from the IPER amended sheets, which have already been transmitted by the International Bureau and entered, as follows:

- 1. (currently amended) Therapeutic treatment device comprising a trigger mechanism and means for providing energy to a light source wherein the device comprises at least one incoherent light source, characterised in that wherein between two or more light sources are arranged in a reflector and that lens means are arranged in front of the reflector and further that the reflector can be arranged in the device, which also comprises trigger means in the shape of a trigger mechanism for connecting the light sources to the energy source.
- 2. (currently amended) Therapeutic treatment device according to claim 1 characterised in that wherein electric circuitry is provided such that each light source can be controlled independently of the other light sources in the device.
- 3. (currently amended) Therapeutic treatment device according to claim 1 or 2 characterised in that wherein at least one light source can emit a series of light pulses.
- 4. (currently amended) Therapeutic treatment device according to any of the preceding claims claim 1 characterised in that wherein a filter can be arranged in the device such that the emitted light will travel through the filter.

- 5. (currently amended) Therapeutic treatment device according to claim 4 characterised in that wherein different filters or no filter can be arranged in the device with respect to every distinct light source.
- 6. (currently amended) Therapeutic treatment device according to claim 2 characterised in that wherein electric circuitry is provided such that each light source can be controlled independently with respect to intensity, wave band, pulse length and sequence.
- 7. (currently amended) Therapeutic treatment device according to any of the preceding claims claim 1 characterised in that wherein one or more of the light sources may be coated with a dye.
- 8. (currently amended) Therapeutic treatment device according to any of the preceding claims claim 1 characterised in that wherein the light sources are selected among flash bulbs, electronic flash tubes, laser diodes.
- 9. (currently amended) Therapeutic treatment device according to any preceding claims claim 1, characterised in that wherein a source of microwave or high frequency radio wave energy is provided in addition to the light sources.
- 10. (currently amended) Light emitting device comprising at least one incoherent light source for use in a therapeutic treatment device according to any of claims 1 to 9 claim 1 characterised in that wherein the light sources and the reflector

are arranged in one replaceable/disposable light emitting device

- 11. (currently amended) Light emitting device according to claim 10 characterised in that wherein the constellation of different light sources in the device constitute a complete specific therapeutic treatment.
- 12. (currently amended) Light emitting device according to any of the claims 10 to 11 claim 10 characterised in that wherein the replaceable/disposable unit comprises means for controlling the sequence and/or the pulse length and/or intensity of each light emitting source.
